DETAILED ACTION

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-18 are rejected under 35 U.S.C. 103(a) as being unpatentable over Walisser et al of record on 1449.

The reference discloses a curable, alkaline, melamine modified phenol-formaldehyde resin is prepared from an initial phenol-formaldehyde resole resin containing from 0.5-2.5% of free formaldehyde by scavenging formaldehyde with 1-12 parts of melamine for each 100 parts of the initial resin to reduce the free formaldehyde resin to less than 70% of that in the initial resin (see Abstract).

Note that the resin, prior to reaction with melamine, varies from about 0.01-1 mole of catalyst for each mole of phenol (see col. 5, line 2), overlapped with these in the claims.

Note that the molar ratio of formaldehyde to phenol is about 1.8-2.4 (see col. 4, line 36), and the temperature of the condensation reaction is in the range of about 40-75 C, overlapped with these in the claims.

Note that the free formaldehyde, prior to reaction, is about 0.5-2.5% by weight (see col. 5, line 12), and after the reaction, is from about 0.01 to less than 0.5% (see col. 5, line 60), overlapped with these in the claims.

The disclosure of the reference differs from the instant claims in that it does not disclose all of the claimed range of the reaction conditions.

However, it does disclose the claimed steps of the process and the range of the reaction conditions are included in these of the claims. Therefore, it would have been obvious to one of ordinary skill in the art to modify said range from the reference within the limitations of the instant claims since they have been shown to be effective in a similar system and thus would have been expected to provide adequate results. There is no showing of unexpected results derived from said selections.
